Remove element

1. Remove self
2. Remove all chilren

1. Remove self using Element.remove()

Auto remove message after 3 seconds

```
const message = document.getElementById('successMessage');
if (message) {
 setTimeout(() => {
 message.remove();
 }, 3000);
}
```

2. Remove all chilren

#	Approach	Desc\
1	target.innerHTML = ""	not optimized as it will trigger HTML parser
2	target.textContent = ""	(recommended) faster according to MDN, compared to innerHTML
3	remove every lastElementChild	take the code block below for ref

```
const ulElement = document.getElementById('todoList');
if (ulElement) {
    while (ulElement.lastElementChild) {
        ulElement.removeChild(ulElement.lastElementChild);
    }
}
```
